

1. Exercise (*warmup*)

- Write a program that asks for a username;
- Use this username to ask how old is a user;
- Calculate and print out how many years it will take to reach the 100th anniversary.

2. Exercise (*warmup*)

Write a program that checks the user's temperature.

- If the user enters between 35 and 37 then output "everything looks good"
- If the user enters < 35 , then print "Too cold";
- If the user enters > 37 , then print "Too hot"

Main task:

Create a program that performs the following actions:

1. Asks the user to enter 2 integers.
2. If the sum of these numbers (S) is less than 20:
counts how many odd numbers are between 0 and S ;
3. If the sum of these numbers (S) is greater than or equal to 20:
counts how many numbers divisible by 7 are between 20 and S .
